

## Controls assessment

### Current assets

Assets managed by the IT Department include:

- On-premises equipment for in-office business needs
- Employee equipment: end-user devices (desktops/laptops, smartphones), remote workstations, headsets, cables, keyboards, mice, docking stations, surveillance cameras, etc.
- Management of systems, software, and services: accounting, telecommunication, database, security, ecommerce, and inventory management
- Internet access
- Internal network
- Vendor access management
- Data center hosting services
- Data retention and storage
- Badge readers
- Legacy system maintenance: end-of-life systems that require human monitoring

Administrative Controls			
Control Name	Control type and explanation	Needs to be implemented (X)	Priority
Least Privilege	Preventive; reduces risk by ensuring that vendors and unauthorized personnel only have access to the assets/data they need to perform their jobs.		
Disaster recovery plans	Corrective; business continuity to ensure systems are able to run in the event of an incident/there is limited to no loss of productivity downtime/impact to system components, including: computer room environment (air conditioning, power supply,		

Administrative Controls			
	etc.); hardware (servers, employee equipment); connectivity (internal network, wireless); applications (email, electronic data); data and restoration		
Password policies	Preventative; establish password strength rules to improve security/reduce likelihood of account compromise through brute force or dictionary attack techniques	X	Hight
Access control policies	Preventative; increase confidentiality and integrity of data	X	Medium
Account management policies	Preventative; reduce attack surface and limit overall impact from disgruntled/former employees		
Separation of duties	Preventative; ensure no one has so much access that they can abuse the system for personal gain	X	Hight

Technical Controls			
Control Name	Control type and explanation	Needs to be implemented (X)	Priority
Firewall	Preventative; firewalls are already in place to filter unwanted/malicious traffic from entering internal network	X	Hight
Intrusion Detection	Detective; allows IT team to		

System (IDS)	identify possible intrusions (e.g., anomalous traffic) quickly		
Encryption	Deterrent; makes confidential information/data more secure (e.g., website payment transactions)	X	Medium
Backups	Corrective; supports ongoing productivity in the case of an event; aligns to the disaster recovery plan	X	Hight
Password management system	Corrective; password recovery, reset, lock out notifications		
Antivirus (AV) software	Corrective; detect and quarantine known threats	X	Medium
Manual monitoring, maintenance, and intervention	Preventative/corrective; required for legacy systems to identify and mitigate potential threats, risks, and vulnerabilities	X	Hight

Physical Controls			
Control Name	Control type and explanation	Needs to be implemented (X)	Priority
Time-controlled safe	Deterrent; reduce attack surface/impact of physical threats		
Adequate lighting	Deterrent; limit “hiding” places to deter threats		
Closed-circuit television (CCTV)	Preventative/detective; can reduce risk of certain events;		

surveillance	can be used after event for investigation		
Locking cabinets (for network gear)	Preventative; increase integrity by preventing unauthorized personnel/individuals from physically accessing/modifying network infrastructure gear		
Signage indicating alarm service provider	Deterrent; makes the likelihood of a successful attack seem low		
Locks	Preventative; physical and digital assets are more secure		
Fire detection and prevention (fire alarm, sprinkler system, etc.)	Detective/Preventative; detect fire in the toy store's physical location to prevent damage to inventory, servers, etc.	X	Hight
